

ANNEXURE -4

Sub: - 700 MM Dia, heavy duty Semi rigid duct pipe for underground ventilation

The ducting should be manufactured from nonporous water proof, reinforced material made from heavy quality NYLON/POLYESTER fabric having PVC coated on both the sides. This ducting should be provided with 6" pitch spiral steel wire reinforcement held in position with the help of welded PVC extruded section on the outer periphery of the ducting. The tensile strength and tear strength of the ducting material should be 250 kg/sq. Cm and 50 kg/Sq.cm. The above ducting should be used for both exhaust & blower application and should be supplied complete with hooks for hanging and suitable leak proof band coupling. The ducting should be supplied in length of 10Mtr. +/- 10%.
